```python
while True:
    print("----------------")
    print("----------------")
    input_string = input("Enter a string: ")
    print("----------------")
    print("----------------")

    if input_string.isalpha():
        reversed_string = input_string[::-1]
        print("Reversed String:", reversed_string)
        break
    else:
        print("Error Reported! Enter text only.")
```
